

CIL MT 2026 — PAPER-I SECTION SHEETS

Coal India Limited | Management Trainee | System Discipline (Post Code 14) | Advt. No. 03/2026

Four sheets — one per Paper-I section, 75 questions each, 300 in total. Inside every sheet the questions are grouped **topic by topic** under their own headings, so you can revise one topic's theory and formulas and then attempt just that block, or sit the whole 75-question sheet as a section test.

Every sheet opens with a topic index giving the question range for each topic. Numbering runs Q1–Q75 within a sheet. **No negative marking in the exam — attempt everything.**

Suggested pace: about 50 seconds per question, i.e. roughly 62 minutes for a full 75-question sheet.

All answer keys are in one section at the end, sheet by sheet.

Reading Comprehension

Directions (Q56-Q57): Read the following passage and answer the questions that follow.

A public sector enterprise is judged by two standards that do not always agree. As a commercial body it must return a profit to its shareholders, the largest of whom is the government itself. As an instrument of policy it is expected to keep fuel affordable, employ locally and invest in regions that private capital avoids.

Q56. The central idea of the passage is that a public sector enterprise

(A) must balance commercial and social objectives (B) has no shareholders (C) is always unprofitable (D) should be privatised

Q57. As used in the passage, "instrument of policy" suggests that the enterprise

(A) serves government objectives (B) sets its own policy freely (C) avoids all regulation (D) manufactures instruments

Directions (Q58-Q59): Read the following passage and answer the questions that follow.

Automation is often presented as a straightforward substitute for labour, but in practice it redistributes work rather than removing it. Machines require maintenance, calibration and supervision, and each of these creates a role that did not previously exist. What changes is not the quantity of work so much as the qualification required to perform it.

Q58. The author's main contention is that automation

(A) reduces machine maintenance (B) lowers wages universally (C) eliminates work entirely (D) shifts the type of work required

Q59. The word "redistributes" is used to suggest that work is

(A) moved into different roles (B) destroyed (C) made voluntary (D) doubled in volume

Directions (Q60-Q61): Read the following passage and answer the questions that follow.

Coal continues to supply the greater part of India's electricity even as solar capacity expands rapidly. Planners defend it on the ground that coal-fired stations deliver the steady baseload that intermittent renewables cannot yet guarantee. Critics reply that postponing investment in storage merely postpones the transition itself.

Q60. The passage is chiefly concerned with

(A) the technical design of solar panels (B) the history of Indian coal mining (C) the cost of electricity to households (D) why coal retains a central role in India's power mix

Q61. In the passage, the word "intermittent" most nearly means

(A) continuous and steady (B) inexpensive (C) occurring at irregular intervals (D) newly invented

Directions (Q62-Q63): Read the following passage and answer the questions that follow.

Interviews reward confidence and articulation, qualities that correlate imperfectly with competence. A candidate who has rehearsed answers may outperform one who has done the work but speaks plainly. This is not an argument against interviews, only against treating them as the final word.

Q62. The passage suggests that interviews

(A) are cheaper than written tests (B) should be abolished altogether (C) always identify the best candidate (D) can favour presentation over ability

Q63. The phrase "correlate imperfectly with" means

(A) are identical to (B) are only partly related to (C) are opposed to (D) are entirely unrelated to

Directions (Q64-Q65): Read the following passage and answer the questions that follow.

A written examination can measure preparation but not persistence. Employers who rely on it alone accept a known limitation in exchange for fairness, since a test administered identically to everyone removes the influence of connection and privilege. The trade-off is deliberate rather than careless.

Q64. The chief advantage of a written examination, according to the passage, is

(A) its impartiality (B) its low cost (C) its brevity (D) that it measures persistence

Q65. The phrase "the trade-off is deliberate" means that the limitation is

(A) accidental (B) knowingly accepted (C) unavoidable by law (D) widely unknown

Directions (Q66-Q67): Read the following passage and answer the questions that follow.

Railway capacity, not mine capacity, has often been the binding constraint on coal despatch in India. A mine can raise production within a season, but a new siding or a doubled line takes years to commission. Stockpiles at the pithead are therefore less a sign of surplus than of a bottleneck further down the chain.

Q66. According to the passage, large pithead stockpiles indicate

- (A) falling demand for coal (B) a transport bottleneck (C) poor coal quality (D) excess mining licences

Q67. In the passage, “binding constraint” refers to

- (A) the factor that actually limits output (B) a legal contract (C) a temporary shortage of labour (D) a financial penalty

Directions (Q68-Q69): Read the following passage and answer the questions that follow.

Rehabilitation of land after opencast mining is frequently described as an afterthought, but the sequence of work decides the outcome. Topsoil that is stored separately at the start can be replaced later to support plantation; topsoil that is mixed with overburden is effectively lost. Restoration, in other words, begins on the first day of excavation.

Q68. The passage argues that successful land restoration depends chiefly on

- (A) the size of the mine (B) planning from the beginning of excavation (C) the quantity of rainfall (D) the number of workers employed

Q69. The phrase “an afterthought” is used to indicate something

- (A) carefully planned (B) technically impossible (C) legally required (D) considered too late

Directions (Q70-Q71): Read the following passage and answer the questions that follow.

A public undertaking that trains its recruits for a year before confirming them is making a calculated investment. The cost is borne up front, while the return depends entirely on retention. Service bonds exist not to punish departure but to make the arithmetic work.

Q70. According to the passage, service bonds are intended primarily to

- (A) penalise employees (B) increase salaries (C) shorten the training period (D) protect the employer’s training investment

Q71. The phrase “borne up front” means the cost is

- (A) recovered immediately (B) shared equally (C) avoided altogether (D) incurred at the beginning

Directions (Q72-Q73): Read the following passage and answer the questions that follow.

Safety training in mines is often treated as paperwork to be completed rather than a habit to be formed. Yet accident records show that the majority of incidents follow lapses in routine procedure, not rare equipment failure. A drill that is rehearsed until it becomes instinctive saves more lives than a manual that is merely signed.

Q72. According to the passage, most mine accidents are caused by

- (A) lapses in routine procedure (B) rare equipment failures (C) shortage of trained staff (D) inadequate manuals

Q73. The tone of the passage towards existing safety training is

- (A) critical (B) approving (C) indifferent (D) humorous

Directions (Q74-Q75): Read the following passage and answer the questions that follow.

Mechanisation in opencast mining has raised output per worker sharply over the last two decades. It has also changed the nature of the workforce required, replacing large numbers of manual labourers with smaller teams of skilled operators and technicians. The gain in productivity is therefore inseparable from a question about employment.

Q74. The passage suggests that mechanisation has

- (A) reduced total coal output (B) had no effect on employment (C) increased manual labour requirements (D) altered the skill profile of the workforce

Q75. The word “inseparable” in the passage implies that the two issues are

- (A) unrelated (B) closely linked (C) easily solved (D) recently discovered
